Steve Drees

For my practical I used the following:

Title or Logo - for the Logo I used a canvas tag

Data Visualization - I used Google Chart to display the data from the 2011 study
• I also used jQuery for the button to show The alcohol used by Gender, by
    Education, and By Age.

jQuery Divs - I used jQuery to animate my containers so when you click on the individual buttons it would display the data

I check and used modernizer for the date checker for the age

I chose a blue gradient for the background and stylized the individual elements on the page
